Conversation: An old method can be used new for re-districting.

Greetings:

I am unable to submit this in person or testify at a public hearing. Thus, as I've mentioned before, take an old method and make it new and use it for redistricting in a manner that could diminish gerrymandering.

Take the old Northwest Ordinance township system and modernize it via geographers/mappers, etc. and apply it to this project. Each township was sixteen square miles and rectangular in shap. Thus, such a system could be used to counter or diminish gerrymandering.

Via search engine there is information and graphics on this system.

Please present this to the commission either via hearing or if permissable, send them this e-mail.

Regards,

TD
