From what I have seen so far, I am not sure you have a clue, how to re-draw the maps. I would not trust the data from the US Census.

Subject: Gerrymandering

This is a total fraudulent process. We need an objective process to create fair districts. This should be done by a software package using an algorithm, not manual gerrymandering with racial and political mandates. The current proposal favors the DNC, minority groups and the left wing agenda to artificially create "minority" or "disenfranchised" districts. Your push for democratic districts also creates a hostile environment for business and we'll continue to see the exodus of jobs to Texas and less hostile states.

Last business out of California, shut off the lights.

Dear commission,

I am respectfully submitting my comments in an email, because the online form would not work in two different browsers.

I am shocked that the committee redrew congressional district lines that separates our long elected representative from the district. It reduces representation of our vital north coast resources down to one! It separates the wine counties which is one of the few economic viable industries in the North Coast.

My other concern is that the numbers provided, I assume, show population increases and decreases, however NOT the total number of constituents. I would like to see how equitable representation is. It was quite skewed that last time I reviewed demographics, giving some areas a representative for close to 50% fewer people, thus an inequitable amount of power.

Please listen to the citizens, be transparent with representative numbers, and don't forget the needs of all the citizens of this diverse state.

Sincerely,
Holly Rodgers
