

Dear Ladies and Gentlemen,

Why in the world do I have to go through 3rd party websites like "sharepoint.com" in order to download a PDF file from a ca.gov website?

This is asinine. Knock it off - you never know what they're doing with your browser data. At least with you people we can vote for those who appoint you and by our citizen efforts tell you to knock it off.

You should not include foreign powers in your website design - EVER. You're Dot GOV! This means nobody gets in the way!

Thank you,

Ian Stedman

PS - And the PDF's still useless. I cannot tell if I'm going to be in CA-32 or CA-26 for the next election. Tell your art design staff to quit using those uselessly thick border lines. What is on which side? Can't tell, it's all in the thick line! IS.
