Subject: Redistricting website "map my community"

Ca Redistricting Commission,

I am not convinced the tool you just offered me is of any use. I tried to create a log in and kept failing. Then I tried to define my community, and I believe I failed when using the tool to map it, save it, and submit it.

I am not sure how you will use this information to construct federal, state and local district boundaries. Can you actually compile this in a sensible way?

I strongly urge you to contact Professor Jonathan Mattingly, at Duke University, who has created mathematical models for creating district mapping, redistricting and combating gerrymandering (which is the reason we voted for an independent commission).

Christopher Kox
